## IMPREGNATION SEALANTS

Godfrey & Wing's IMPREX brand sealants are synonymous with vacuum impregnation worldwide. From the original IMPREX formulations in the 1970s to the latest in Thermosetting and Anaerobic methacrylate technology, GW's Imprex sealants continue to lead the industry.

IMPREX sealants are designed to have a low viscosity for effective penetration of microporosity, and to exhibit excellent adhesion to the inner walls of porosity to ensure a robust seal. Patented polyester surfactants allow for the sealants to be washed easily from exterior cavities, taps and surfaces.

All IMPREX sealants are environmentally friendly, containing no toxic substances. Depending on local regulations, effluents may be disposed of without permit in sanitary drains.

Sealing microporosity in cast metal products is the most common application of IMPREX sealants. But in addition to sealing microporosity IMPREX sealants are also used seal powdered metal components for pressure retention and to reduce tool chatter during machining. Sealing electrical components.

Our standard sealants, field proven in the most demanding applications over years of use, carry approvals from most global automotive, aviation and defense OEMS. Godfrey & Wing also will custom formulate sealants to meet the most unique requirements.

While there are many companies that offer sealants, Godfrey & Wing differentiates itself from the field not only through formulating, manufacturing and testing our sealants, but through using them on a daily basis. Our Company owned service facilities impregnate tens of thousands of aviation and automotive components on a daily basis in Imprex sealants – so we know what you face every day, month and year in maintaining your sealants and process.

### Thermosetting Impregnation Sealants

IMPREX 95-1000A

IMPREX 95-1000

IMPREX 95-1000HT

Anaerobic Impregnations Sealants

IMPREX 95-1000AC

IMPREX 95-1000ACH
