## EQUIPMENT

### IMPREGNATION SYSTEMS

The heart of any successful impregnation program is selecting the right equipment for the customer's manufacturing environment and the utilizing a process that seals the component 100% of the time. Many Companies have a strategy that one system fits all, one style fits all or one process fit. Godfrey & Wing's believes that when competing in a global economy customers need a strategy that looks upstream and downstream the manufacturing process then incorporates the appropriate impregnation system, process and sealant solution.

Godfrey & Wing's engineering staff designs and builds equipment for any impregnation requirement. Whether it is the groundbreaking single piece flow CFI or a batch processing plant, our team of skilled engineers will design a system and process that fits any production schedule, part specification, or floor-space constraint. The key to our success is that we not only design and build impregnation systems, we run them, and have done continuously since 1948 – longer than any other Company in the world. GW knows what seals parts, cost effectively and reliably. It is our business and has been our passion for over 60 years.

Regardless of your production and part requirements, contact Godfrey & Wing and allow us to design, build and implement an impregnation system and process that custom fits your unique needs.
