VACUUM IMPREGNATION SERVICE

All customers are not alike. Some need to have the vacuum impregnation process inside their factories. Others desire to outsource their impregnation requirements, maintaining their manufacturing floorspace for use on core competencies. The characteristic that sets Godfrey & Wing apart from all of our competitors is our ability to service our customers in either case.

Godfrey & Wing, Inc. provides strategic sourcing capabilities to meet a wide range of our customers' specifications. Our goal is to control and reduce our customers' cost of business by eliminating unnecessary transportation, inventory and overhead while, at the same time, improving overall quality.

As an ISO/TS 16949 supplier for impregnation services, Godfrey & Wing has the ability to process components for our customers who do not wish to make the capital investment for impregnation equipment. We can do this in any one of our five process centers or one of our allied service centers around the globe.

Our process equipment is the most advanced technology in the world. Whether it is our patented continuous flow impregnation (CFI) or traditional batch systems, we have the systems and processes to guarantee the highest yield of castings without defects resulting from porosity or contamination. Godfrey & Wing service centers utilize the DVP process, the most robust in vacuum impregnation, to consistently deliver superior results regardless of material, porosity type or machining content.
